

Web-server Embedded-system Tester *Administrator Guide*

This project makes use of the Django framework, and should be referred to the Django Administration Guide:

<https://docs.djangoproject.com/en/3.2/ref/contrib/admin/>

The site administration should be seldom used, however if it is required, it is available to administrators via the top-right drop-down box (their GitHub icon) and by clicking "Admin Login". After logging in, there is little that is unavailable via the regular Instructor View.

However, courses will need to dynamically change TAs and potentially teachers, and that can be accomplished by clicking "Users", then the desired user that should be promoted to TA or teacher, and add them to the "Instructor" group by clicking on the "Instructor" option and moving it to "Chosen groups". Afterwards, click "SAVE". Administrators can also be added by enabling the "Staff status" and "Superuser status" options.
